

Quoted from our announcement channel on our discord :

We heard your concerns and we were already looking for a multisig partner because we want to bring you guys safety for the launch The multisig means he has to validate every transaction (at least before we KYC) which makes it impossible for us to rug We are in contact with <https://twitter.com/LelouchViCrypto> and he accepted to multisig with us. He's been co-founding and/or a multisig partner with several projects (which none of them were rugs) like crofarm, genesys, hermes, etc.. He should tweet about it today (modifié)
